

What is Git?

Git is a Version Control System for tracking changes in computer files. It is generally used for Source Code Management in software development.

Git is used to track changes in the source code

Distributed version control tool used for source code management

Allows multiple developers to work together

Supports non-linear development because of its thousands of parallel branches

Git Workflow – 3 States

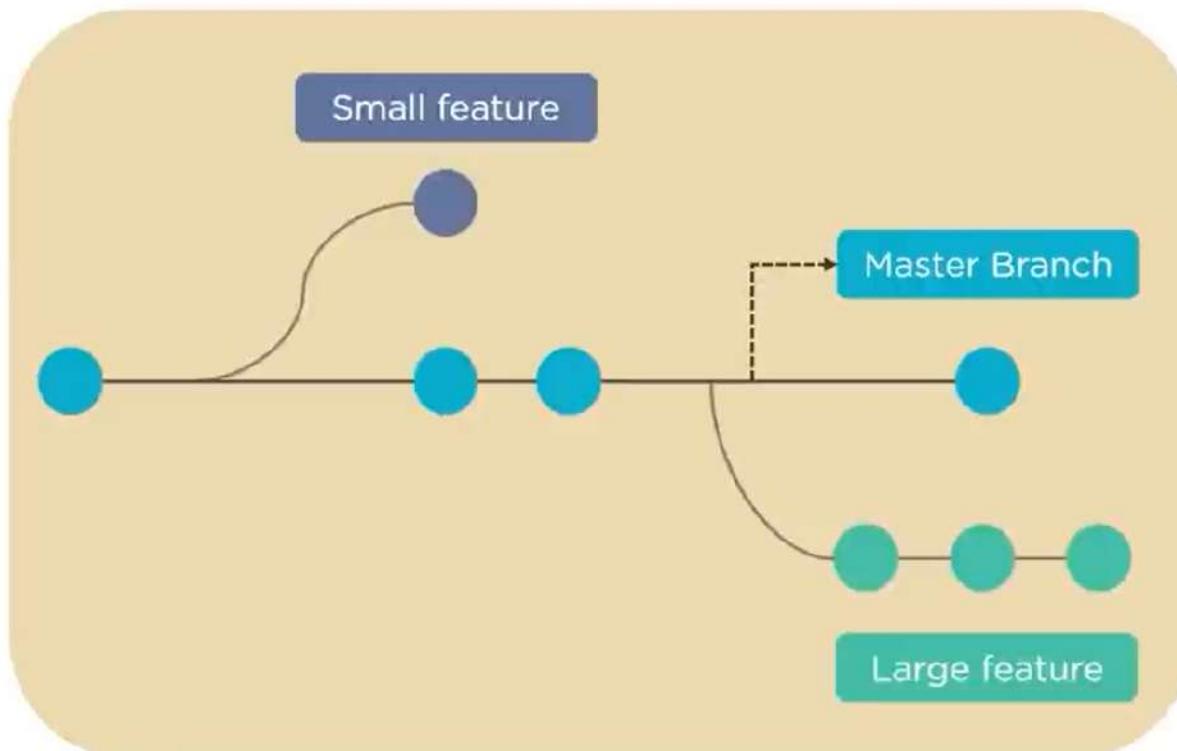

Checkout any existing version, make changes, stage them and commit

Branch in Git

- ❑ Branch in Git is used to keep your changes until they are ready
- ❑ You can do your work on a branch while the main branch (master) remains stable. After you are done with your work, you can merge it to the main branch
